

Quality control of PCR.

Resulting amplification patterns (1KB Plus DNA Ladder) shows that number six, seven and eight has disappeared, unknown reason possible it is due to the commonality. The other numbers: one, two, tree, four, five, nine and ten stopped between 500 kb and 300 kb (see figure 1).

*Figure 1. Nine individual chromatography-purified DNA fragments with reference bands on left side in the range of 100 kb to 5000 kb, marked "M". Loading buffer in an order from 1 to 10 starting from left to right side.*
