

Additional file 1. Photomicrographs of a fibroma in a Sitka black-tailed deer (case no. 15).

a: The fibroma was covered by an acanthotic epithelium. Histology revealed distended, entrapped follicles (arrow), embedded in a mass composed of spindle cells and collagen bundles (Obj. x4); *b*: The majority of the mass was composed of interweaving bundles of collagen (arrow) typical of a fibroma (Obj. x10).
